

CLAIMS

I claim:

- 1 1. A V-shaped razor, comprising:
 - 2 two elongate arms, each arm having one end joined to define
 - 3 a vertex, each arm having a distal end opposite the vertex;
 - 4 a flexible and elongated blade housing pivotally attached
 - 5 between the distal ends of the elongated arms; and
 - 6 at least one elongate blade mounted to the housing;
 - 7 wherein the blade housing and the attached blade flex into
 - 8 a concave shape and into a convex shape in order to conform to
 - 9 the contours of a user's body.
- 1 2. The V-shaped razor according to claim 1, wherein said
- 2 elongated arms form a V-shaped handle.
- 1 3. The V-shaped razor according to claim 1, further
- 2 comprising a flexible cross member interconnecting said arms at
- 3 a position between said vertex and the distal ends of said arms.

1 4. The V-shaped razor according to claim 1, further
2 comprising gel disposed on said blade housing.

1 5. The V-shaped razor according to claim 1, wherein the
2 distal ends of said elongated arms are bent forward at an obtuse
3 angle.

1 6. The V-shaped razor according to claim 1, wherein said
2 housing is pivotally mounted to said elongated arms.

1 7. The V-shaped razor according to claim 1, wherein each
2 of said elongated arms has a post portion of a post-and-socket
3 joint, said blade housing having opposing ends and sockets
4 defined in the opposing ends, the post portions being received
5 by the sockets.

1 8. The V-shaped razor according to claim 1, wherein said
2 at least one blade comprises two elongated blades.

1 9. The V-shaped razor according to claim 1, wherein said
2 elongated arms and said blade housing are made of plastic.

1 10. The V-shaped razor according to claim 1, wherein said
2 elongated arms and said blade housing each have textured
3 portions.

1 11. A V-shaped razor, comprising:
2 two elongate arms, composed of molded plastic, each arm
3 having one end of each arm joined to define a vertex, each arm
4 having a distal end opposite the vertex;
5 a flexible blade housing pivotally attached between the
6 distal ends of the elongated arms;
7 at least one elongate blade mounted to the housing;
8 a flexible cross member interconnecting the arms at a
9 position between the vertex and the distal ends of said arms;
10 and
11 means for lubricating a user's skin when shaving;
12 wherein the elongated arms, cross member, and blade housing
13 are textured; and
14 wherein the blade housing and the attached blade flex into
15 a concave shape and into a convex shape in order to conform to
16 the contours of a user's body.

1 12. The V-shaped razor device according to claim 11,
2 wherein said lubricating means includes gel disposed on said
3 blade housing.
